

Box plot showing the distribution of the number of iterations for different coarsening ratios. The x-axis is 'Coarsening Ratio' (1.0, 0.9, 0.7, 0.5, 0.3) and the y-axis is 'Iterations' (0, 2, 4, 6, 8). The plot shows that as the coarsening ratio decreases, the number of iterations generally increases, with a significant jump at 0.9 and 0.7 compared to 1.0. The distribution at 0.3 is very tight and low.

Coarsening Ratio	Median	Q1	Q3	Min	Max	Outliers
1.0	~8.5	~8.5	~8.5	~8.5	~8.5	None
0.9	~8.5	~4.5	~8.5	~0.5	~8.5	None
0.7	~4.5	~0.5	~8.5	~0.2	~8.5	None
0.5	~0.2	~0.2	~6.0	~0.0	~8.5	None
0.3	~0.1	~0.1	~0.1	~0.0	~0.1	~0.5, ~0.6, ~0.7, ~0.8

A box plot illustrating the distribution of Relative Cost for different Coarsening Ratios. The y-axis, labeled 'Relative Cost', ranges from 0.95 to 1.20. The x-axis, labeled 'Coarsening Ratio', shows values 1.0, 0.9, 0.7, 0.5, and 0.3. For a ratio of 1.0, the cost is exactly 1.0. As the ratio decreases, the median cost increases, and the spread (interquartile range and whiskers) also increases, with more outliers appearing at lower ratios.

Coarsening Ratio	Median	Q1	Q3	Lower Whisker	Upper Whisker	Outliers
1.0	1.00	1.00	1.00	1.00	1.00	None
0.9	1.00	0.998	1.01	0.992	1.02	0.952, 0.965, 1.03, 1.032, 1.035
0.7	1.01	1.00	1.025	0.992	1.048	0.96, 1.065
0.5	1.045	1.025	1.058	0.99	1.085	1.112
0.3	1.102	1.072	1.125	1.00	1.21	1.215
